| EXP 2 | Setting Up a Zoho Creator Account and Exploring the Platform Architecture and Interface |
|---|---|

## Aim:

To set up a Zoho Creator account and explore the platform architecture, features and user interface used to build the Hotel Room Booking & Front Office Management application.

## Theory:

Zoho Creator is a cloud-based low-code application development platform. Applications are built using visual designers and Deluge scripting. The main architectural components are:

- **Applications:** containers that hold forms, reports, pages, workflows and settings.
- **Forms:** collect and store data (Rooms, Room Booking Form).
- **Reports:** display stored records as list, Kanban, calendar etc.
- **Pages:** custom dashboards that combine charts, panels, reports and forms.
- **Workflows:** event based automation using Deluge.
- **Deluge Script:** Zoho's scripting language for business logic.
- **Users and Permissions:** control access to the application.

## Procedure:

1. Sign in to Zoho Creator with the Zoho account and open the Creator home.
2. Open the Hotel Room Booking & Front Office Management application.
3. Explore the Design (UI builder) area where forms, reports and pages are listed in the navigation menu.
4. Open the Workflow section to view form workflows, schedules, approvals, blueprints and functions.
5. Open Settings to view User Permissions, Schema Builder, Application IDE, Widgets and Variables.
6. Open the Application IDE to view the script definition of forms, reports and pages.

## Output:

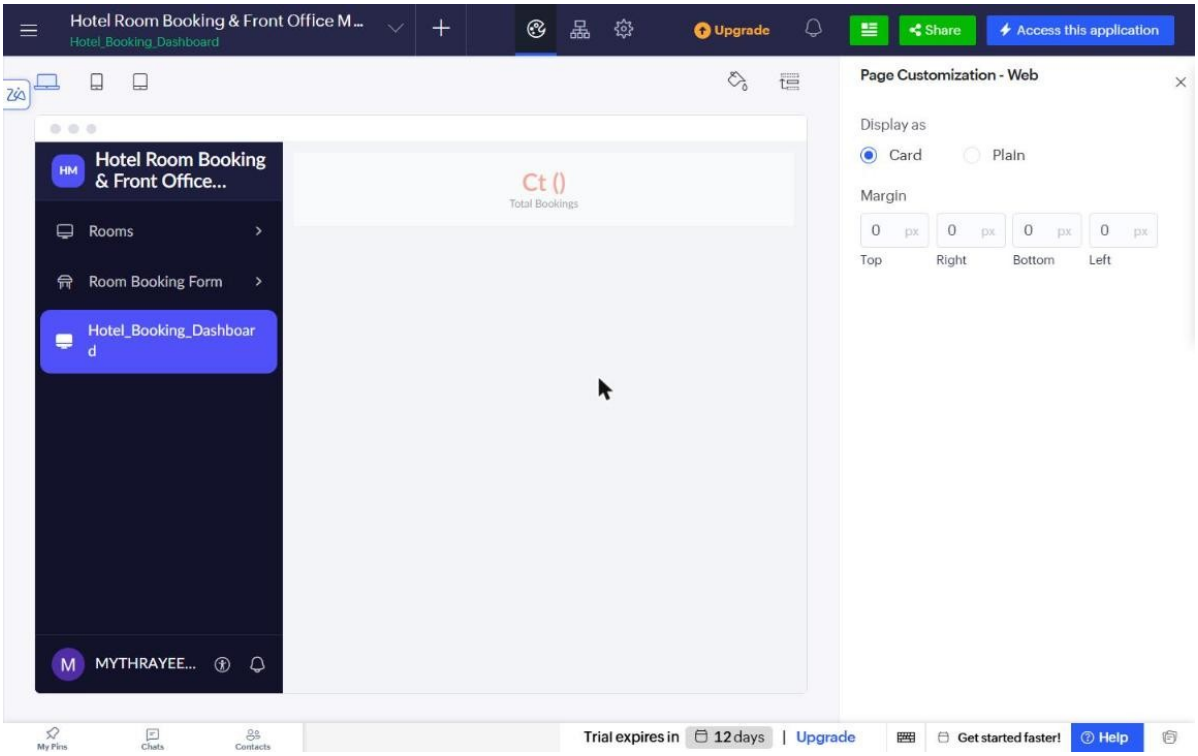

*Fig. 2.1: Application Builder (Design area) of the Hotel Room Booking application*

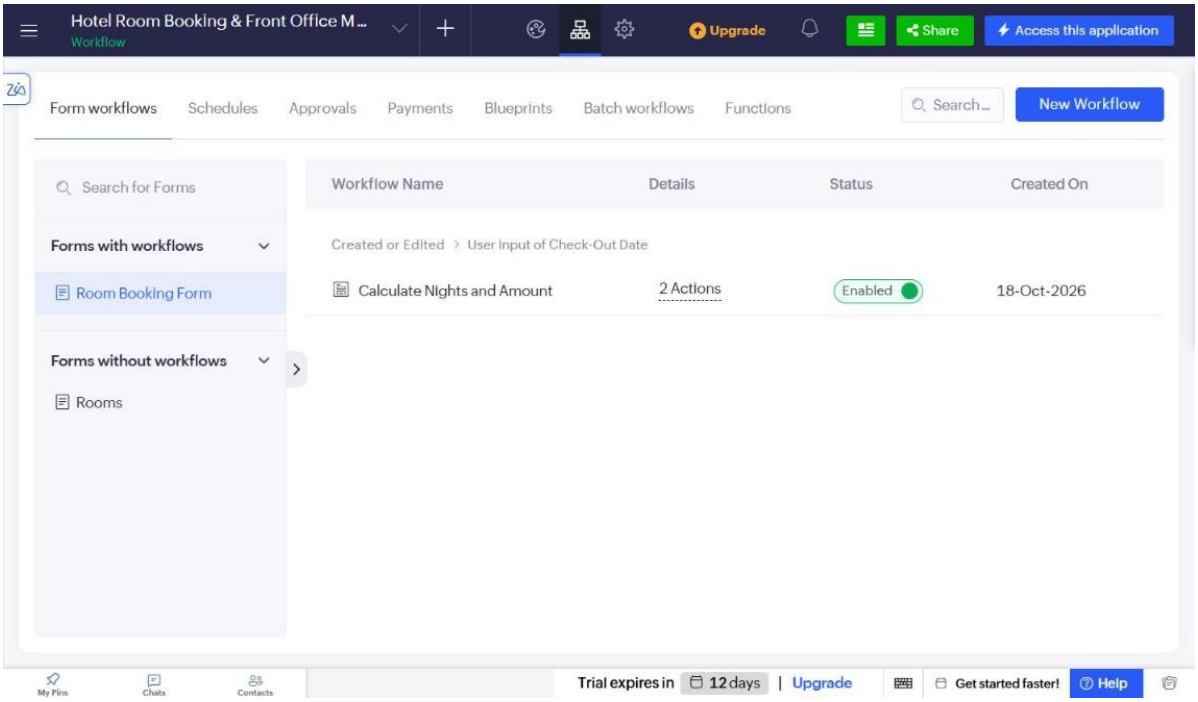

*Fig. 2.2: Workflow section of the application*

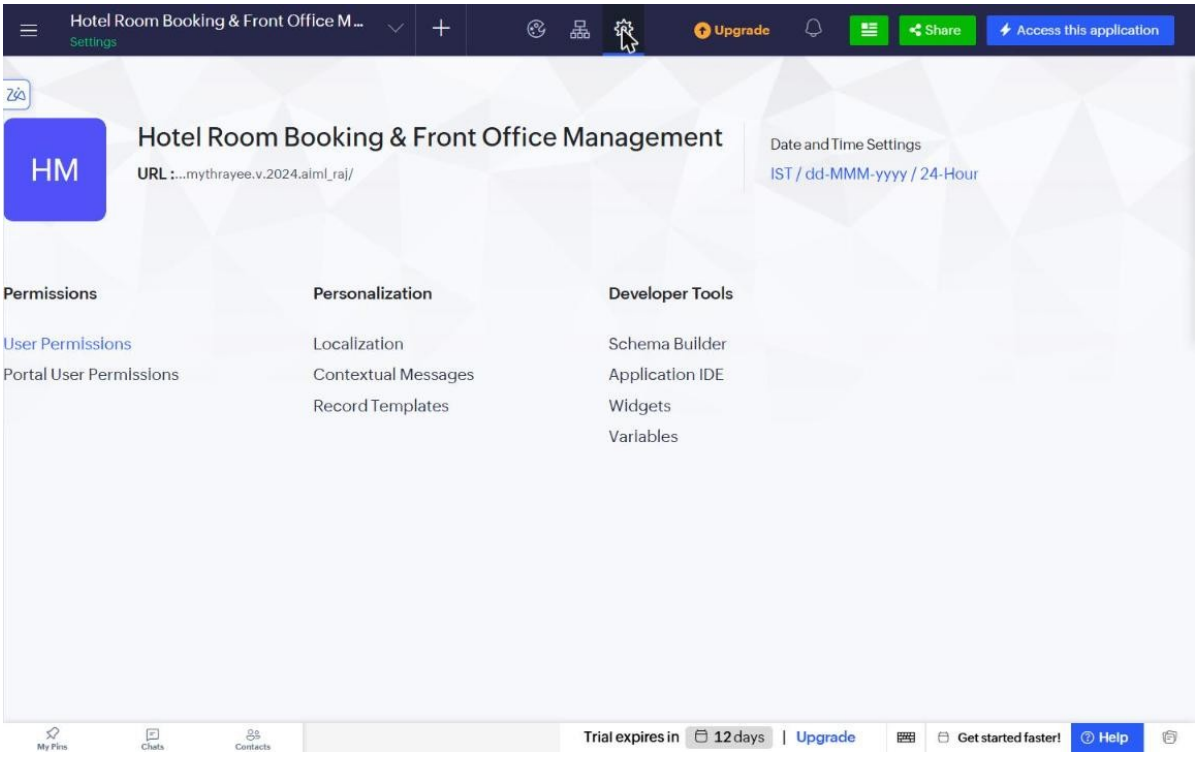

*Fig. 2.3: Application Settings - Permissions, Personalization and Developer Tools*

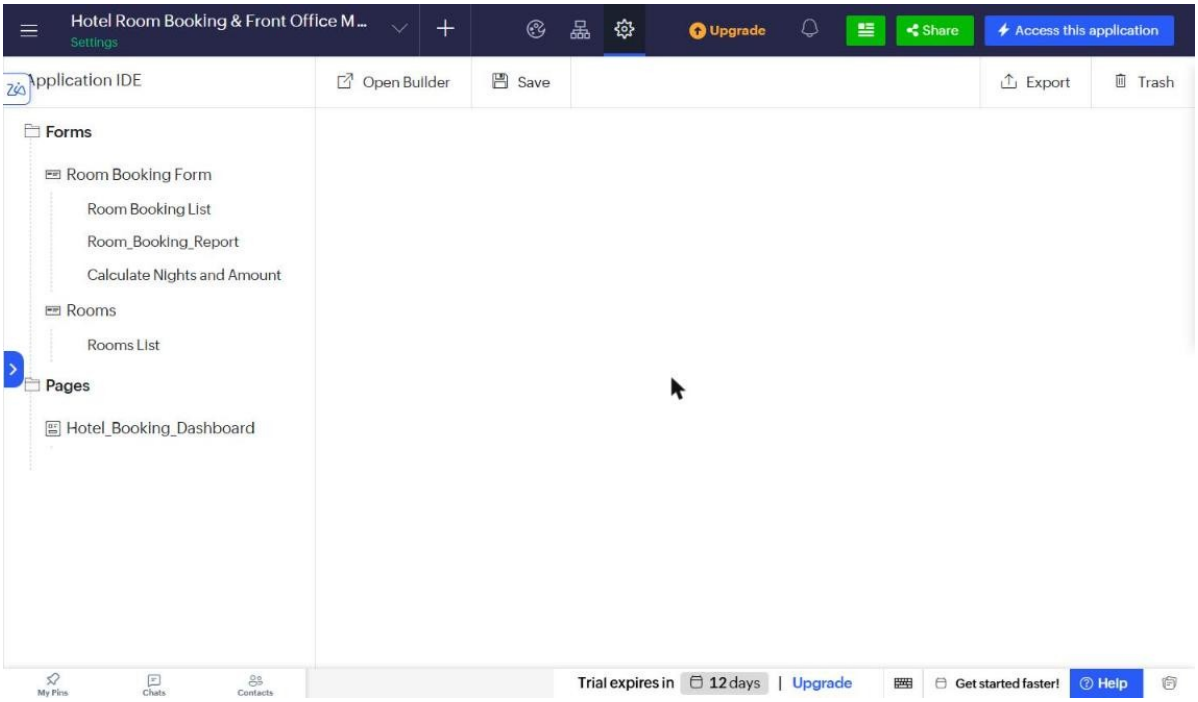

*Fig. 2.4: Application IDE showing forms, reports and pages*

## Result:

A Zoho Creator account was set up and the platform architecture and interface - application builder, forms, reports, pages, workflow section, settings and Application IDE - were explored successfully.
