EXP 5(b)	Dashboards

Aim:

To create a dashboard in Zoho Creator to visually represent and analyse the hotel booking data using KPI panels, charts and an embedded report.

Theory:

Dashboards are pages built with the Page Builder. Panels show KPI values, charts show aggregated data and reports can be embedded for detail. The Hotel_Booking_Dashboard shows total bookings, total booking amount, total rooms, bookings by room type, bookings by status and revenue by room type.

Procedure:

1. Open the Page Builder and open the Hotel_Booking_Dashboard page.
2. Add Panel elements for Total Bookings (count), Total Booking Amount (sum of Total Amount) and Total Rooms.
3. Add a Column chart: Room Booking Form, X = Room > Room Type, Y = Count of Booking ID.
4. Add a Pie chart: X = Status, Y = Count of Booking ID.
5. Add a Column chart for Sum of Total Amount by Room Type.
6. Embed the Room_Booking_Report and arrange the layout.
7. Save and view the live dashboard.

Output:

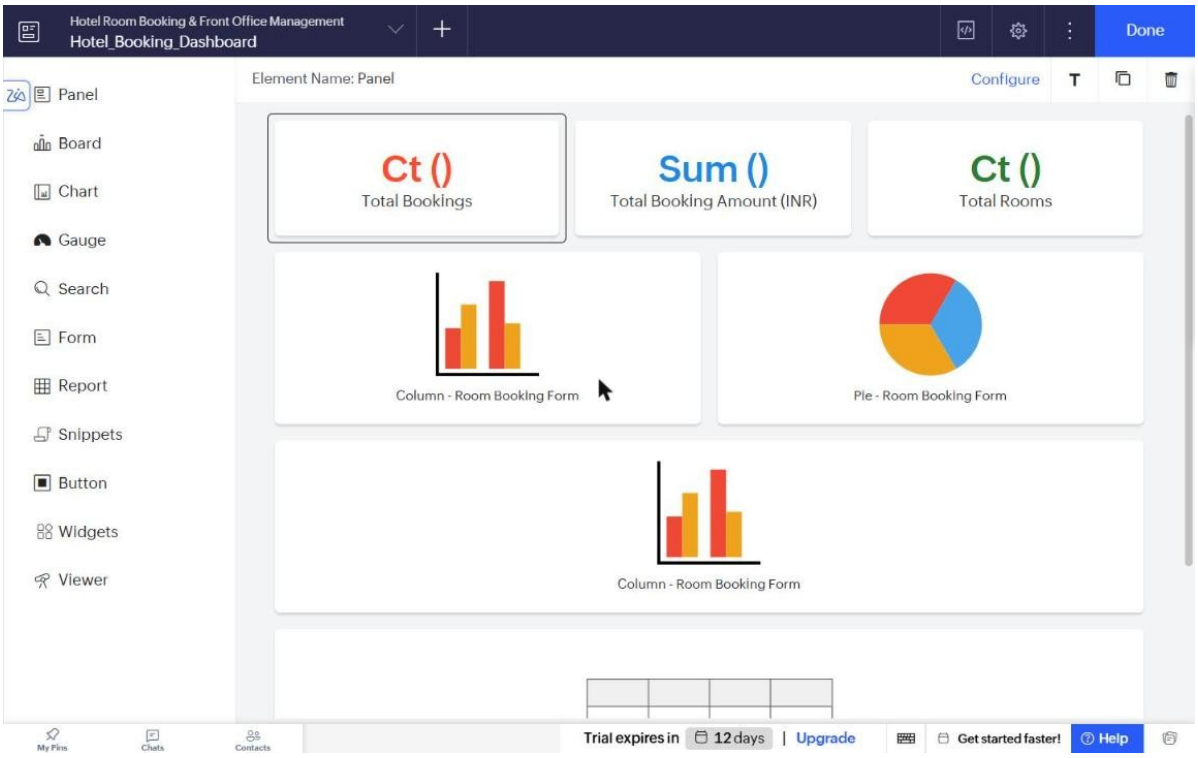

Fig. 5b.1: Dashboard design in Page Builder

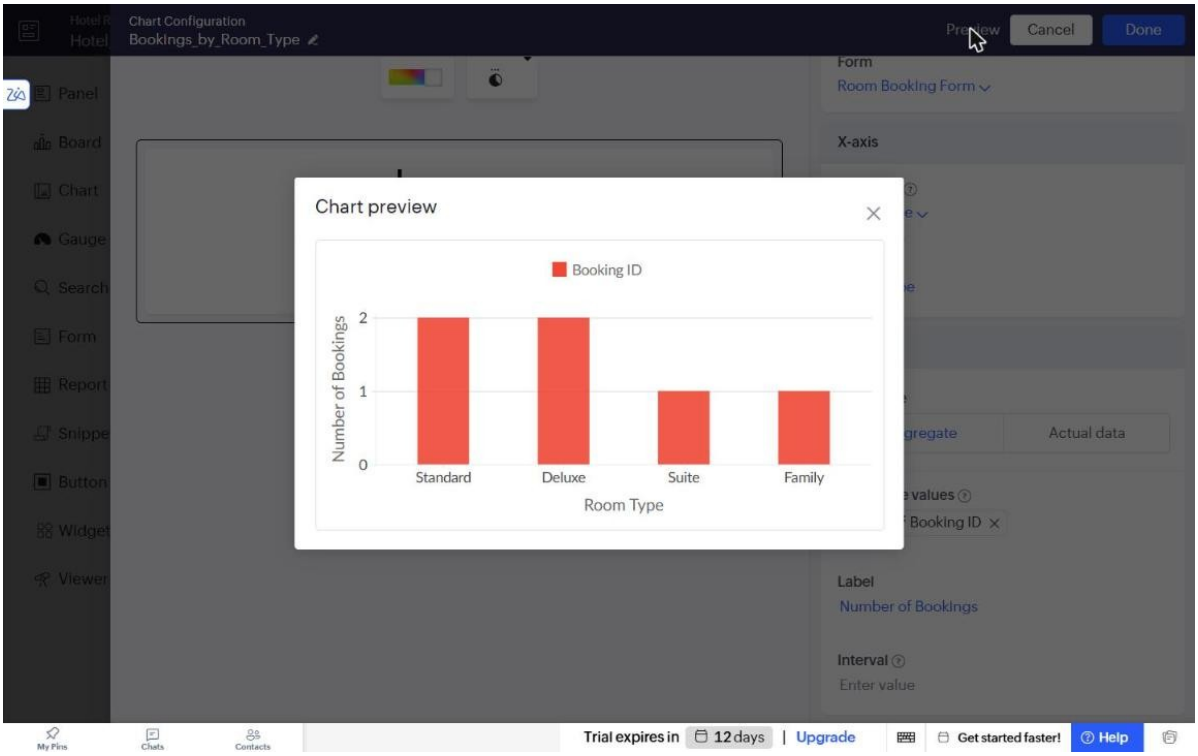

Fig. 5b.2: Chart configuration - Bookings by Room Type (preview)

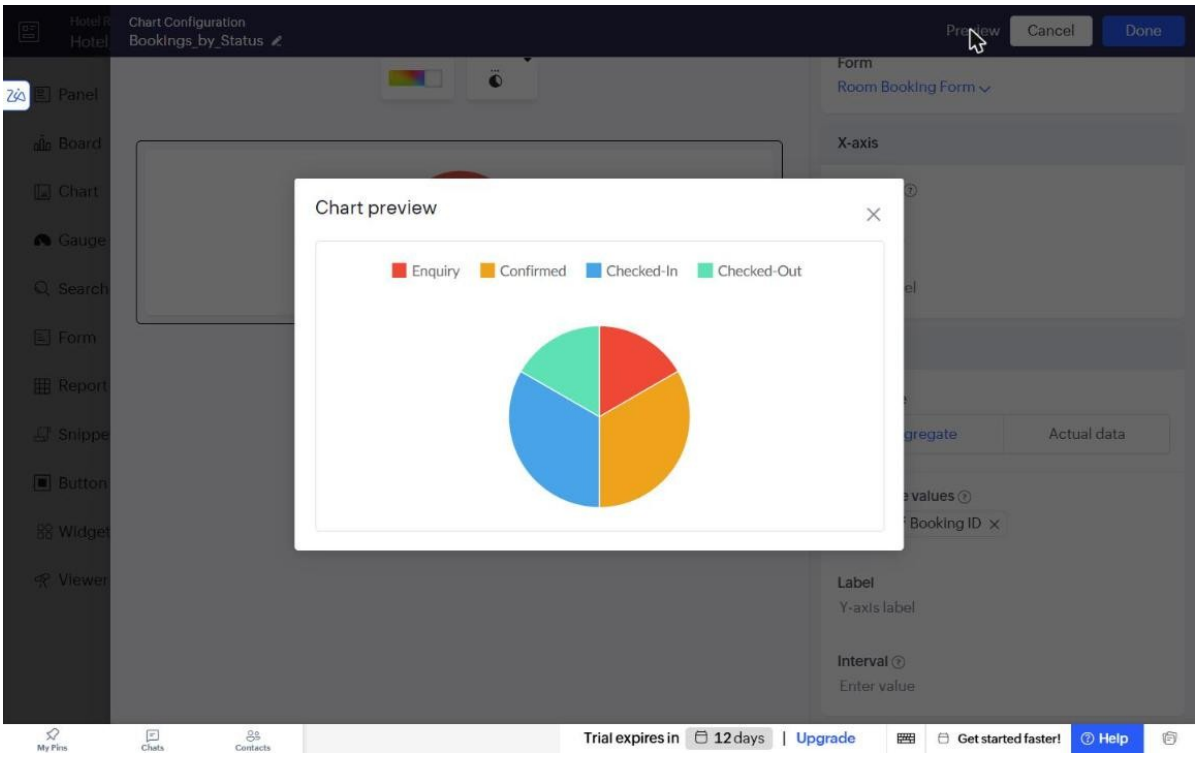

Fig. 5b.3: Chart configuration - Bookings by Status (preview)

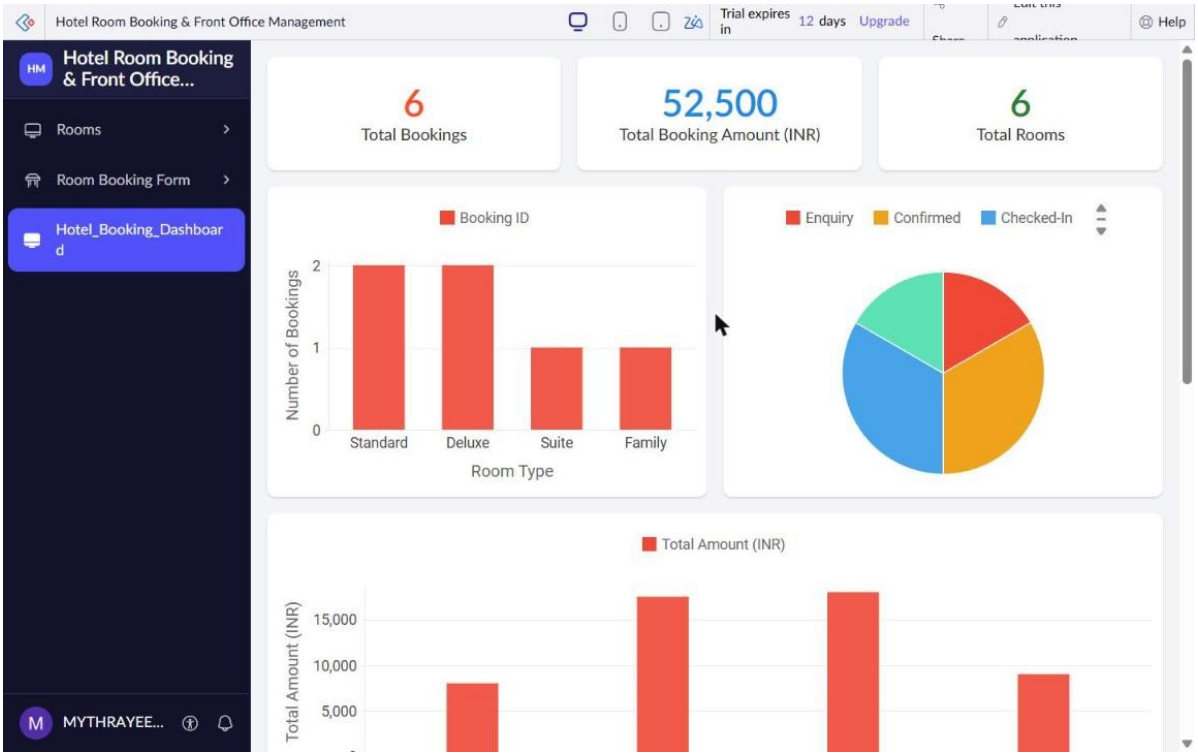

Fig. 5b.4: Live dashboard - KPIs and charts

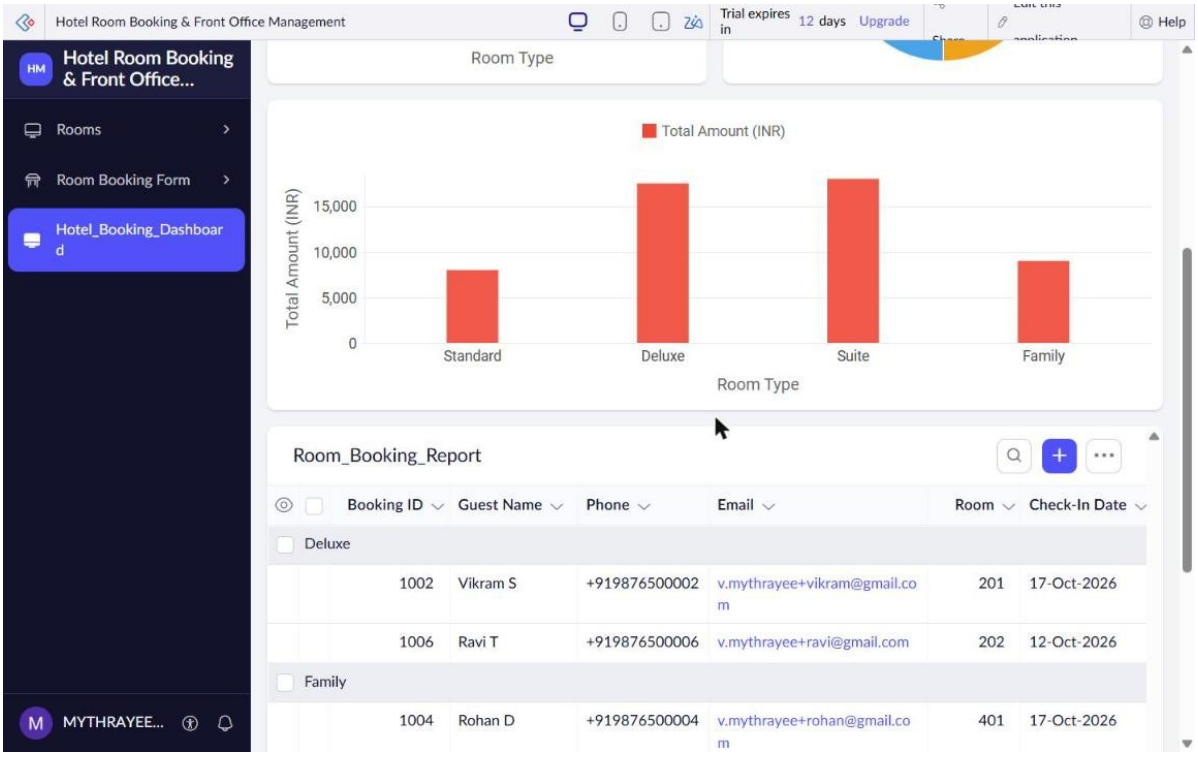

Fig. 5b.5: Revenue by Room Type and embedded report

Observation:

Metric	Value

Total Bookings	6
Total Booking Amount	INR 52,500
Total Rooms	6
Standard / Deluxe / Suite / Family	2 / 2 / 1 / 1
Enquiry / Confirmed / Checked-In / Checked-Out	1 / 2 / 2 / 1

Result:

The Hotel_Booking_Dashboard was created and displayed the booking data correctly using KPI panels, charts and an embedded report. All values matched the expected counts of the sample data.
