EXP 7	Integrating Zoho Creator

Aim:

To integrate the Hotel Room Booking application with an email service so that a booking confirmation is sent automatically to the guest after a booking is created.

Theory:

Zoho Creator workflows support notification and integration actions such as Send Email, Send SMS, push notifications and pushing data to other services. The Booking Confirmation Email workflow runs on successful submission of a new booking and sends the booking details to the guest's Email field.

Procedure:

1. Open the Workflow section and create a new workflow on the Room Booking Form.
2. Select Created and Successful form submission; name it Booking Confirmation Email.
3. Add a Notification action and choose Send email.
4. Set From = admin email and To = ${Email} (guest email field).
5. Set the subject "Hotel Booking Confirmation - Booking ID ${Booking_ID}".
6. Add Guest Name, Booking ID, Room Type, Check-In, Check-Out, Guests and Status to the message.
7. Save and enable the workflow.

Output:

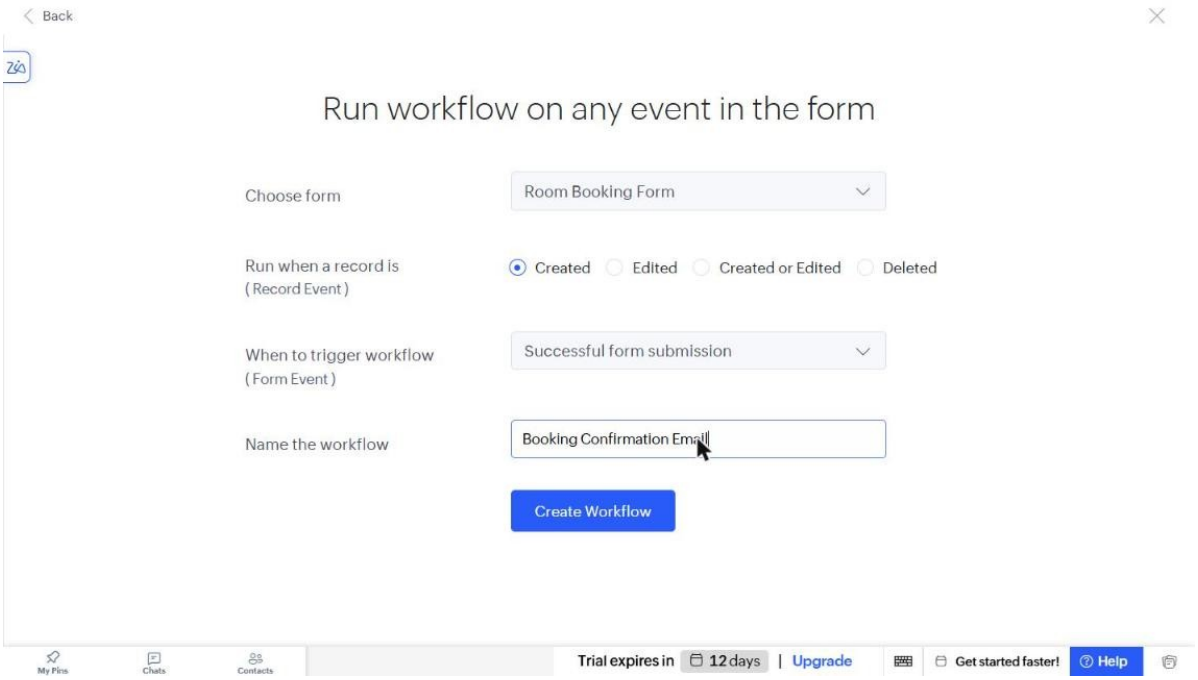

Fig. 7.1: Creating the email workflow on successful submission

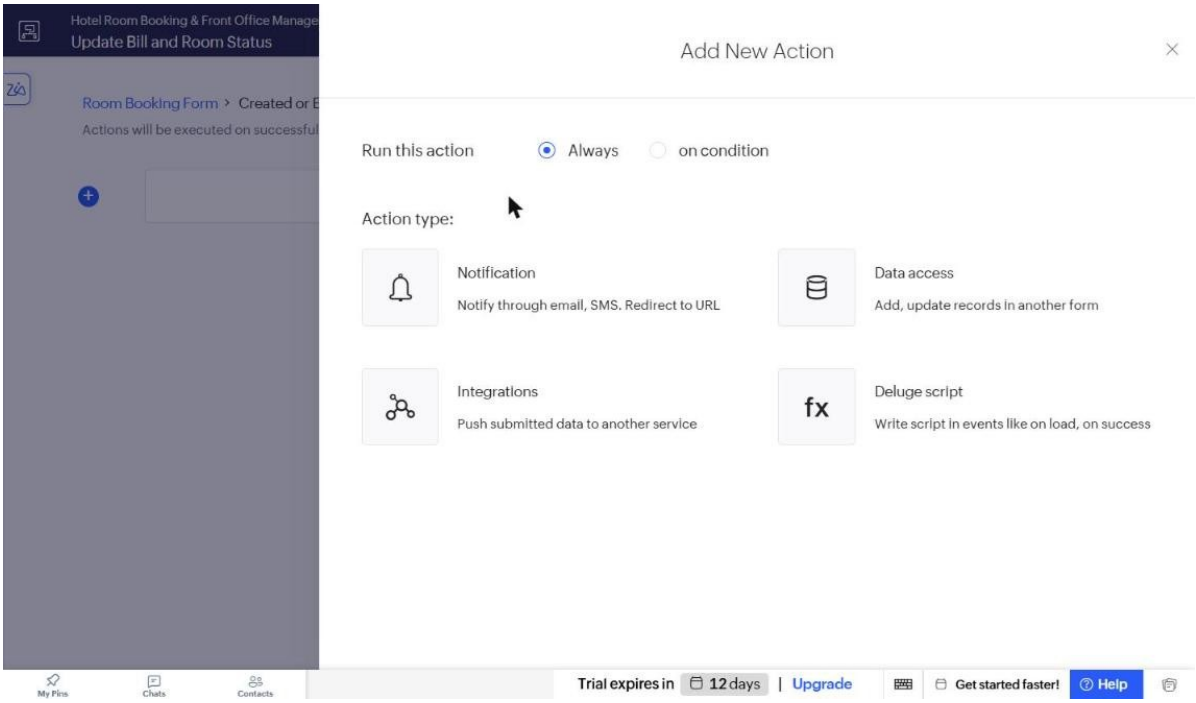

Fig. 7.2: Action types - Notification, Data access, Integrations, Deluge script

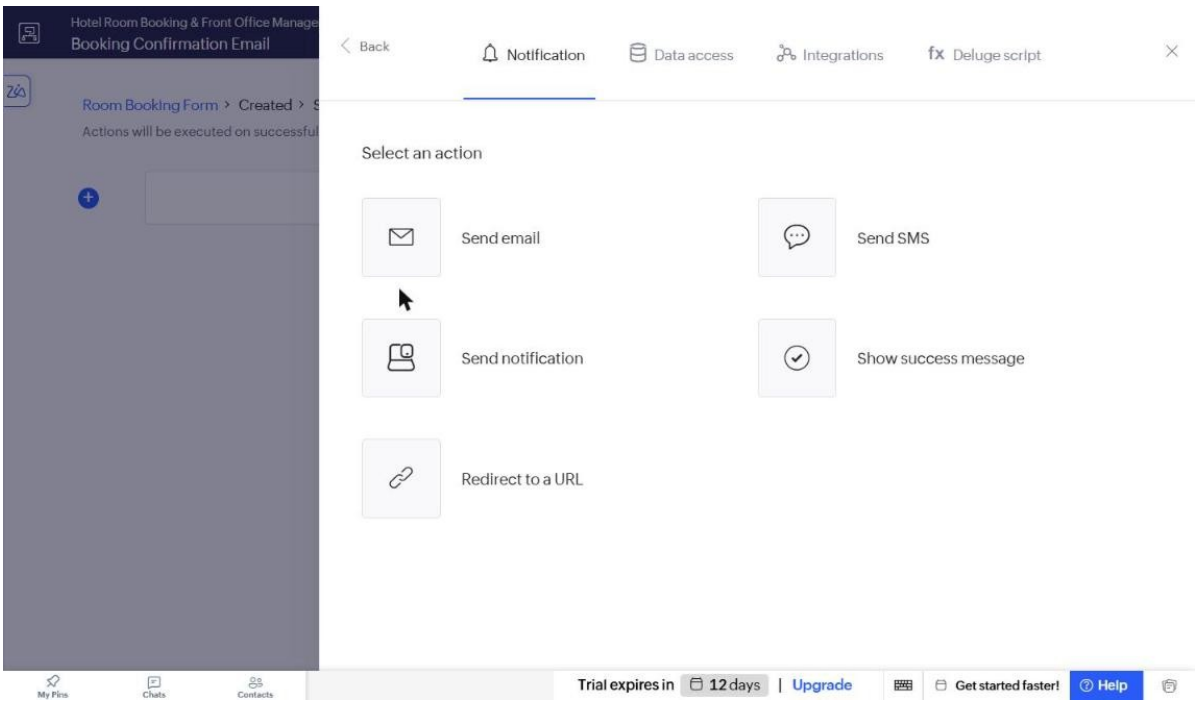

Fig. 7.3: Notification actions - Send email

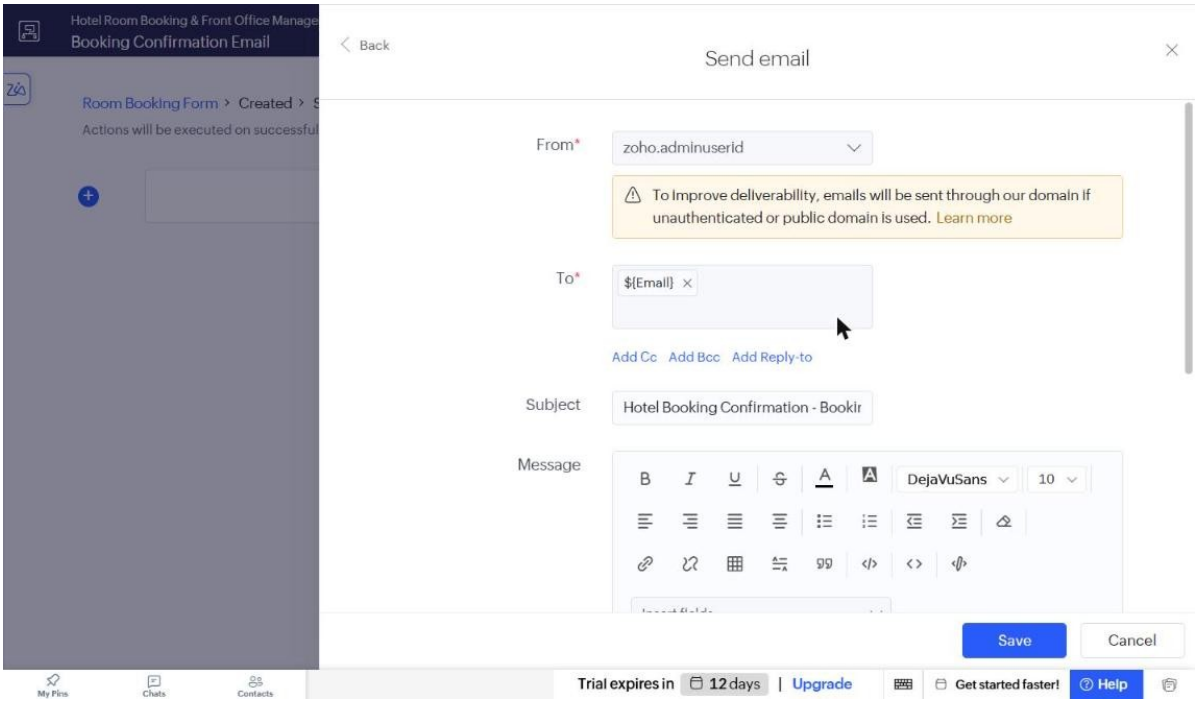

Fig. 7.4: Email action with guest Email field as recipient

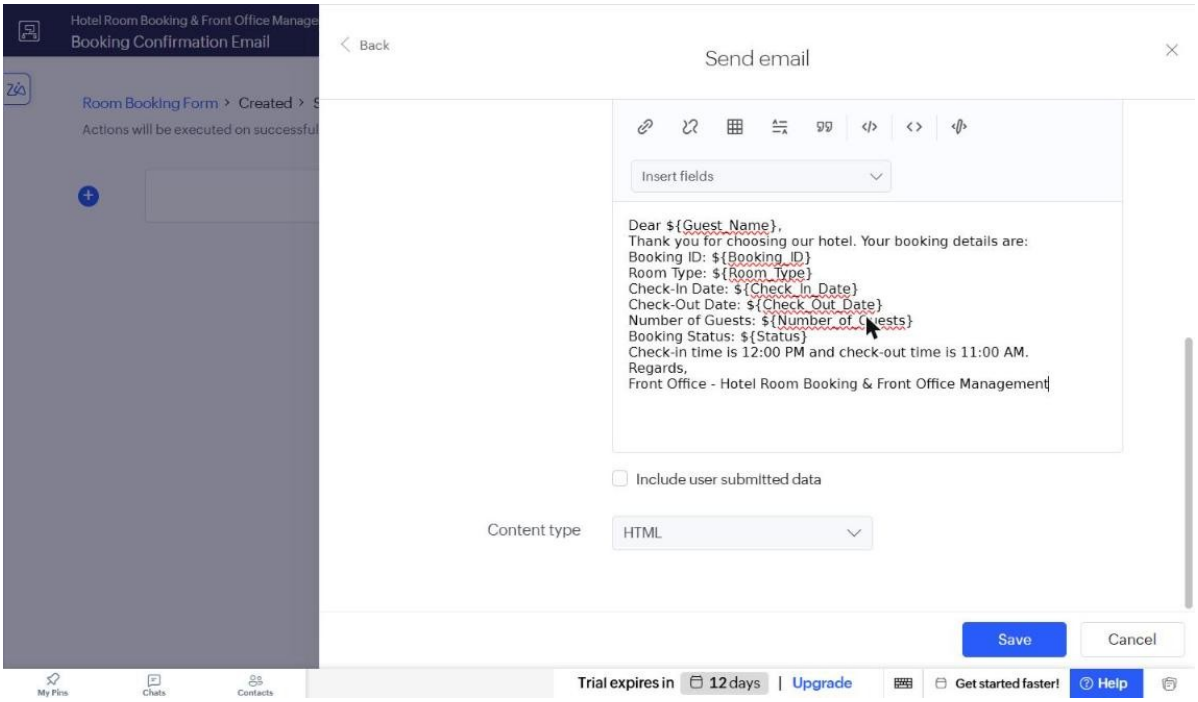

Fig. 7.5: Email message with booking fields

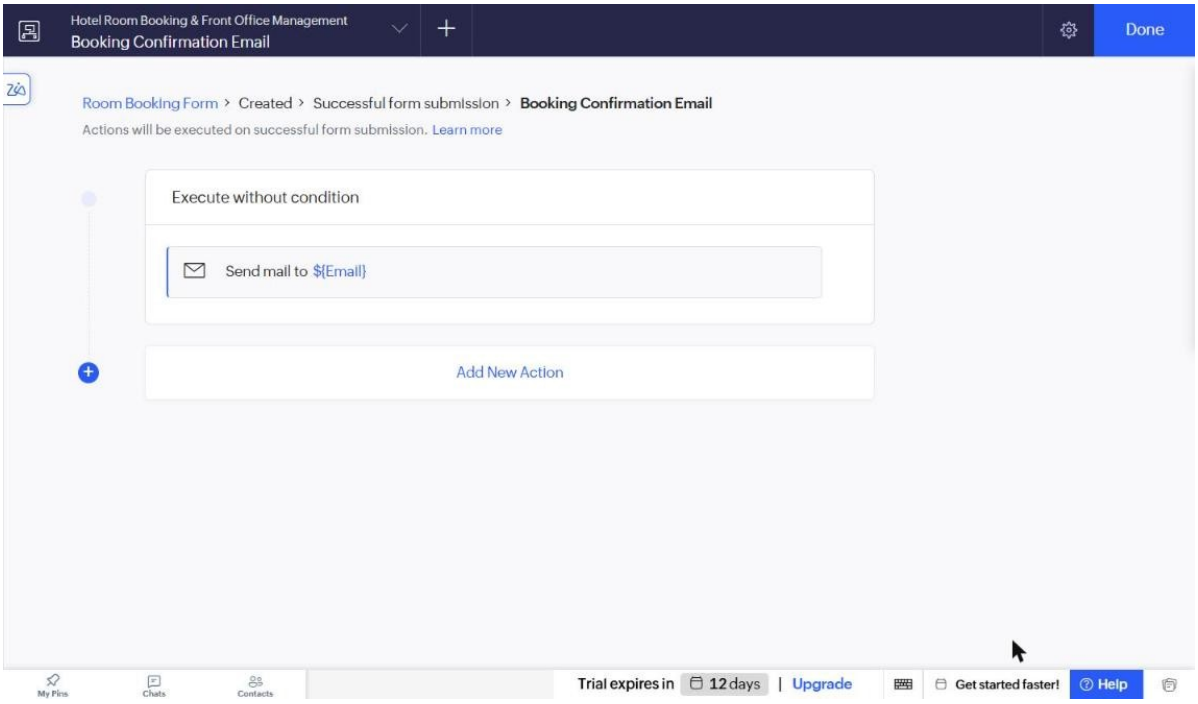

Fig. 7.6: Email action saved in the workflow

Result:

The Hotel Room Booking application was integrated with the email service through a workflow that sends a booking confirmation with the booking details to the guest when a new booking is created.
