EXP 8	User Management, Role-Based Access Control (RBAC) and Security Configuration in Zoho Creator

Aim:

To configure user management and role-based access control in the Hotel Room Booking application so that each type of user can access only the data meant for them.

Theory:

RBAC gives access based on roles. In Zoho Creator, Settings > User Permissions has three parts:

- **Permissions (Profiles):** decide which forms, reports and pages a user can access - default Read and Write profiles.
- **Roles:** a hierarchy where a higher role can see records owned by lower roles.
- **Data Sharing:** rules that control record sharing.

Roles for the hotel: CEO > Front Office Manager > Front Office Staff and Housekeeping Supervisor.

Procedure:

1. Open the application in Edit mode and click Settings > User Permissions.
2. Open the Permissions tab and view the Read and Write profiles.
3. Open the Roles tab and click Add Role.
4. Create Front Office Manager reporting to CEO.
5. Create Front Office Staff and Housekeeping Supervisor reporting to Front Office Manager.
6. Expand the hierarchy and open the Data Sharing tab.

Output:

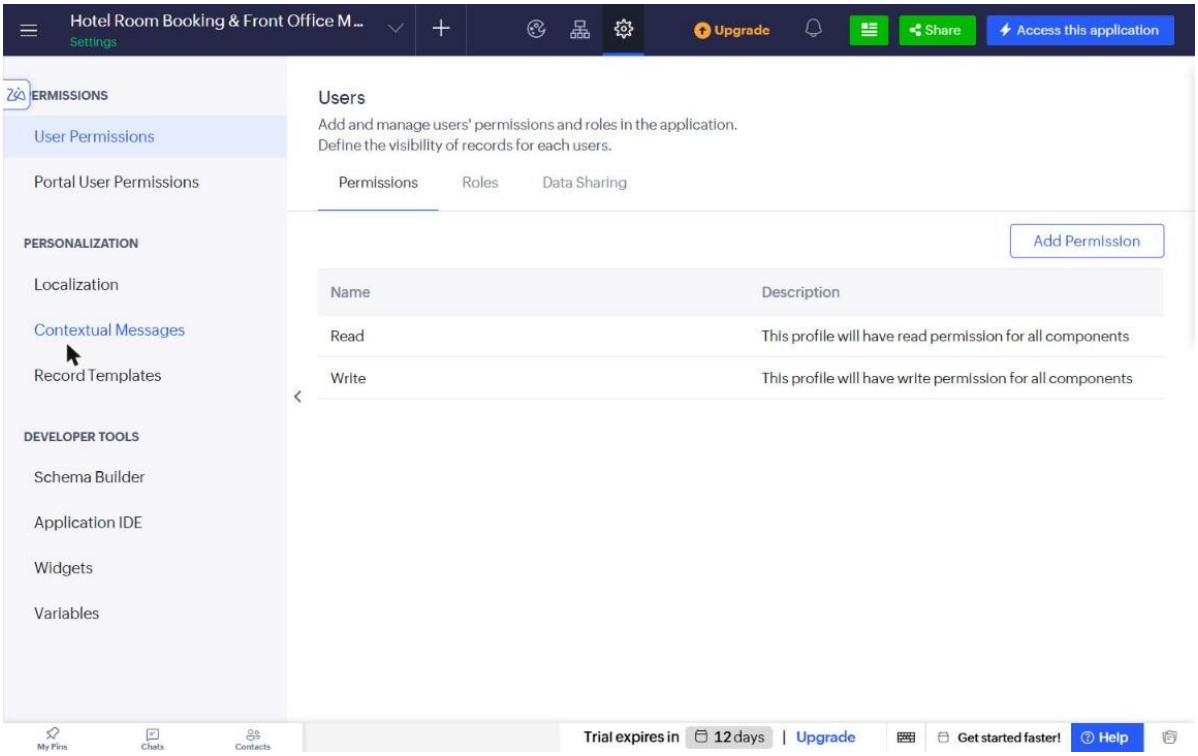

Fig. 8.1: User Permissions - default permission profiles

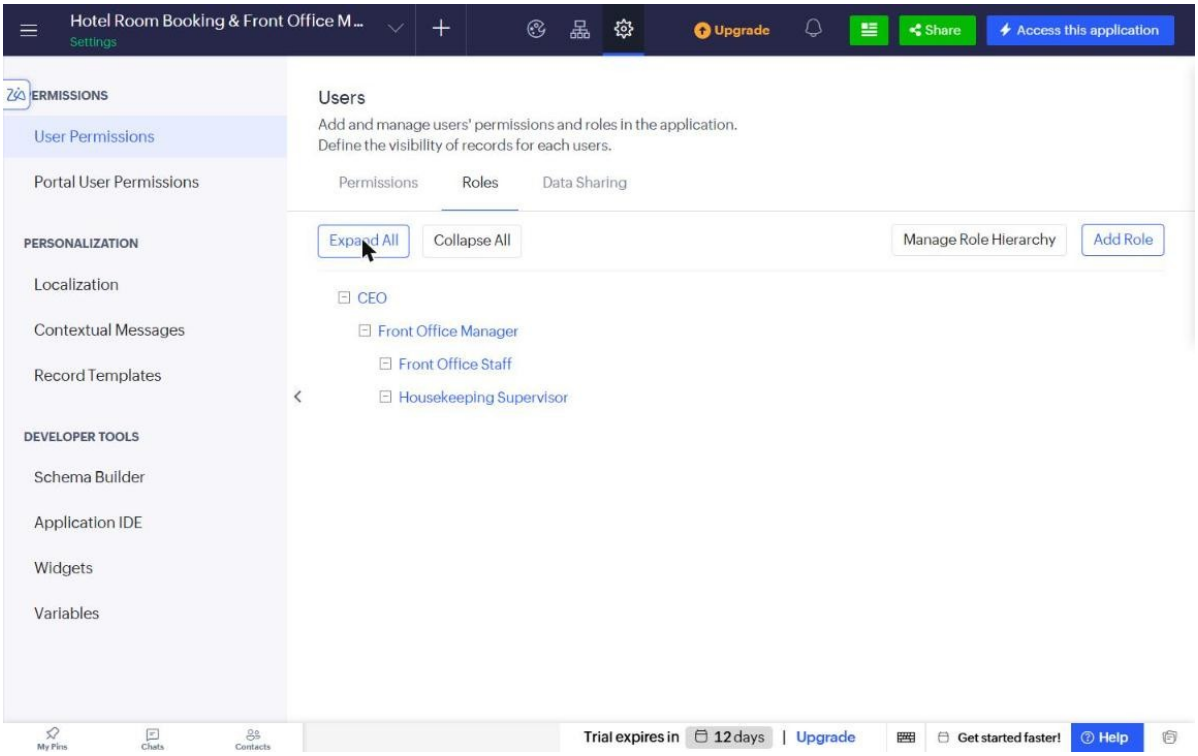

Fig. 8.2: Role hierarchy of the hotel application

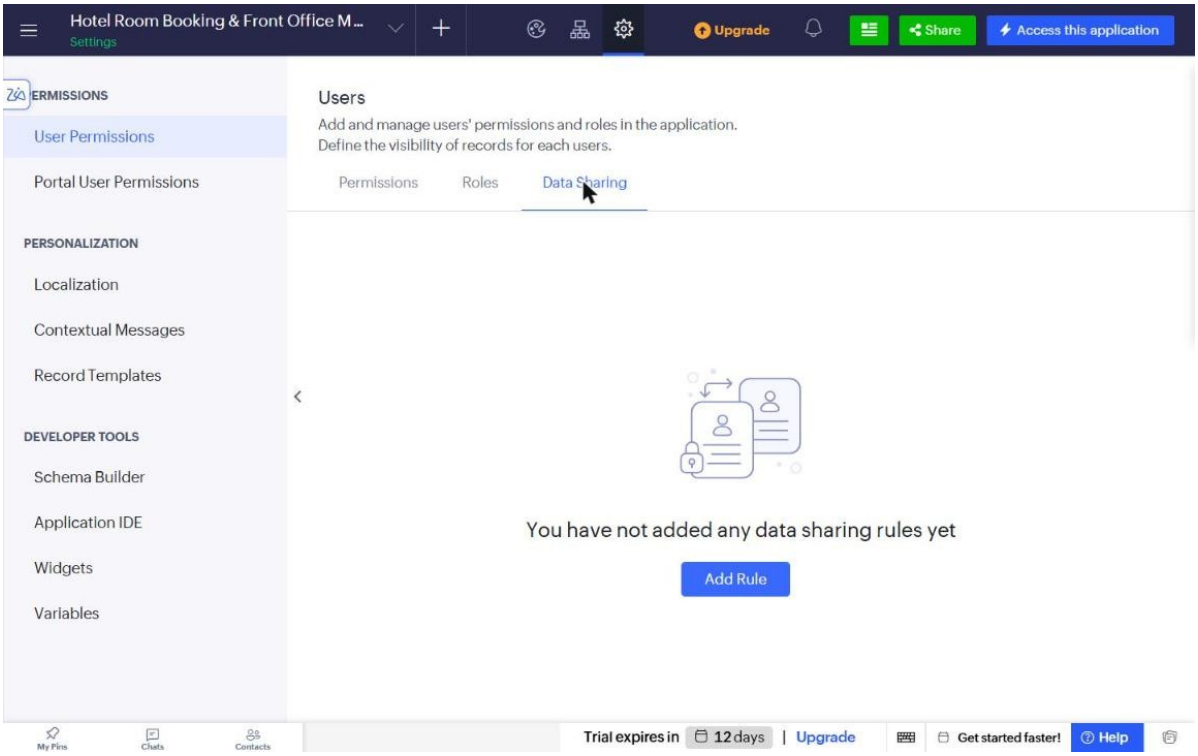

Fig. 8.3: Data Sharing settings

Observation:

Role	Reports To	Access
CEO	-	Full application
Front Office Manager	CEO	Bookings, reports, command center
Front Office Staff	Front Office Manager	Booking entry and search
Housekeeping Supervisor	Front Office Manager	Room status

Result:

User permissions and a role hierarchy were configured for the Hotel Room Booking application, so that higher roles can view the records of lower roles and access is controlled by role.
